SUMMARY

Full Stack Developer with 4+ years of experience building scalable web applications using React, Angular, Node.js, TypeScript, and PostgreSQL. Experienced in developing identity verification platforms, reusable SDKs, analytics dashboards, AI-assisted recruitment systems, and real-time applications. Skilled in designing end-to-end solutions, integrating backend services, optimizing application performance, and delivering production-grade software used by thousands of users.

CORE COMPETENCIES

System Design Fundamentals · REST API Design · State Management · Authentication & Authorization · Real-Time Communication · Database Design · Performance Optimization · SDK Development · Component Library Development · Browser APIs

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, HTML5, CSS3

Frontend: React.js, Angular, Next.js, Redux, Context API, Angular Material, Material UI, Bootstrap, Tailwind CSS, Chart.js

Backend: Node.js, Express.js, RESTful APIs, WebSocket, Socket.IO

Databases: PostgreSQL, MongoDB, Firebase Firestore

Cloud & Tools: GCP, Azure, Docker, CI/CD, Git, GitHub, GitLab, Postman, VS Code, Jira, Figma

Other: Authentication (JWT, OAuth), SDK Development, Real-Time Systems, Browser APIs (MediaPipe, WebRTC, Camera, MediaRecorder)

EXPERIENCE

Research & Development EngineerDec 2021 — Present

Jukshio Technology Innovation Private LimitedHyderabad, India

- Developed full-stack web applications using React, Angular, Node.js, TypeScript, and PostgreSQL across identity verification, analytics, recruitment, and AI/ML domains—supporting 20,000+ daily users.
- Built a reusable React SDK for identity verification enabling third-party applications to integrate document capture, face liveness, and video verification workflows through plug-and-play components.
- Implemented real-time face validation using MediaPipe including face alignment, distance checks, multi-face detection, and capture readiness—plus document tilt and orientation detection for improved capture quality.
- Designed real-time communication systems using WebSocket for video-based identity verification and live agent-customer interactions with session management and connection state handling.
- Built reusable frontend libraries and component systems across products, promoting code reusability, maintainability, and consistent UI/UX.
- Developed analytics and reporting dashboards with Chart.js used by business and operations teams to monitor platform performance, onboarding metrics, and verification outcomes.
- Implemented REST APIs, database optimizations, pagination strategies, and performance improvements for large datasets—significantly reducing load times and improving scalability.
- Collaborated closely with product, backend, QA, and AI/ML teams to deliver production-grade software following Agile/Scrum practices.

Frontend Developer InternAug 2021 — Nov 2021

Sukshi AcademyHyderabad, India

- Developed responsive user interfaces for an AI/ML application by translating Figma designs into production-ready Angular components with TypeScript.
- Integrated frontend components with RESTful APIs and collaborated with backend and AI/ML teams to deliver end-to-end features.

FEATURED PROJECTS

Identity Verification SDK — React, TypeScript, MediaPipe, UserMedia, Browser APIs

- Developed a reusable React SDK enabling third-party applications to integrate identity verification workflows through plug-and-play components for document capture, face liveness, and video liveness.

- Implemented real-time face validation using MediaPipe (face alignment, distance checks, multi-face detection) and document tilt/orientation detection across mobile and desktop.
- Integrated browser camera and media recording APIs for secure image and video collection; designed SDK-to-backend communication flows for verification requests.

Digital KYC Platform — *Angular, Angular Material, Bootstrap, Go APIs*

- Built a configurable digital KYC platform supporting Aadhaar, Passport, Driving License, PAN, and Voter ID verification for financial organizations (Manappuram, Muthoot).
- Integrated backend verification services for document validation, face matching, and identity checks; implemented centralized state management across complex multi-step workflows.

Video KYC Platform — *React, Angular, WebSocket, Node.js, Express.js, PostgreSQL, GCP*

- Developed a multi-role Video KYC platform with real-time video sessions, WebSocket communication, encrypted document storage, and dedicated dashboards for agents, customers, auditors, and administrators.

AI Interview & Recruitment Platform — *React, Context API, Material UI, Node.js, MongoDB*

- Built an AI-assisted recruitment platform with multi-step interview workflows, AI-generated question pipelines, chat-based assessments (text, image, audio, video), and company-wise analytics dashboards.

Analytics & Operations Dashboard — *Angular, Chart.js, Node.js, Express.js, PostgreSQL, GCP*

- Built analytics dashboards for monitoring onboarding transactions, verification outcomes, and operational KPIs with trend analysis, filtering, reporting, and audit-trail capabilities.

AI/ML Data Curation Dashboard — *Angular, Node.js, PostgreSQL, GCP, Azure*

- Developed an internal data curation platform used by 400–500 daily users with role-based authentication, cloud storage integration (GCP, Azure), and structured data review workflows for AI/ML model training.

EDUCATION

Bachelor of Computer Science Jul 2018 — Jul 2021

The University of Burdwan · GPA: 8.39 (A+)
